

THE WEIRD SCIENTIST AND HIS CHIPMUNKS

By Drestin Ter Haar

4th grade

June 2 2:00 am. Pita Detective agency. Drestino has a meeting with Landen.

“There’s a mystery going on,” said Landen. “What?” I asked. “There is a scientist that made a serum and put it into a chipmunk.” “Why?” I asked. “How is this a problem?” “You don’t get it, sir, these chips have wiped out 4 major agency’s.” “Okay we need to catch this suspect but first we need some suspects. And, kids, you know why this meeting took so long? Because he was playing on Facebook that’s why so there’s a lesson kids do not play on your phone. But after that I broke his phone Hehe.”

So Landen goes and gets all three suspects and they’re all scientists. Their names are Pokimia, Supenchia, and Supa. Detective Jeff and Sam investigate their lab coats. Sam finds a serum but we don’t know whose coat it is. They all look the same. We tried to find some DNA samples but didn’t find any. All of these scientist are really good at making potions, but I am suspecting that it is Supa because he looks suspicious but I don’t know.

June 3 10:30 am. A deeper investigation

We go into their cells and find in Supa’s a Serum in there. But it’s in a bottle feeder like the ones you use for hamsters. And then we hit the jackpot! We find five hamsters plus weird food then...ALERT! ALERT! IT’S SUPA ESCAPING! “Oh, no,” I said. By then he was already gone. “Why did he just leave his stuff,” asked Jeff? “I don’t know,” Landen said. “I’m getting my tracker out,” I said. “Why?” Landen asked. “I put every prisoner with a microbot hooked up to them in case they escape.” “Smart thinking,” said Sam. “He’s already in San Fransisco.” I said worriedly.

June 3 5:00 am. The trip

So we go to California and we find his lab. It was a long trip. Even with our high tech planes it took 7 hours to get there but it was worth it. But wasn’t this what Sam needed? To see all the tourist attractions so that took an hour. We found a massive chipmunk in a park. And we got the serum and destroyed him. This seemed to solve the chipmunk problem.
